Thang Le Viet

AI Engineer

levietthang0512@outlook.com | (+84) 989394637 | thanglv | toreleon | Ho Chi Minh City, Viet Nam

PROFESSIONAL SUMMARY

AI Engineer with a strong background in computer science and a keen interest in history, innovation, and complex problem-solving. As an INTJ-A, I am comfortable in analytical environments, where I combine strategic thinking, technical skills, and an entrepreneurial mindset. I enjoy connecting theoretical concepts with practical applications and finding ways to turn challenging ideas into useful, real-world solutions.

WORKING EXPERIENCE

Co-founder & Vibe Coding Engineer at *Stealth Startup* *Jun 2024 — Present*

- Built end-to-end conversational AI systems by integrating open-source text-to-speech (TTS), speech-to-text (STT), and large language models (LLMs) for low-latency, real-time dialogue applications.
- Conducted research and implementation of multi-agent architectures, advancing agentic system workflows for next-generation SaaS platforms.
- Gained hands-on experience with vibe coding environments and tools such as Cursor, GitHub Copilot, V0, Replit, and Lovable to enable dynamic, AI-assisted development workflows.
- Acquired extensive experience in deploying and orchestrating multi-service architectures for scalable, cloud-based applications.

AI Engineer III at *FPT AI Center - AI4SE Laboratory* *Jan 2024 — Present*

- Developed an event-driven agentic platform to automate code analysis, code review, and bug localization, reducing manual review effort by 25% across two pilot projects.
- Designed scalable clustering algorithms to segment large legacy codebases by entry points, improving accessibility and documentation of system design by 30%.
- Led research and development efforts in applying syntactic parsers and knowledge graphs to enhance information retrieval and enable advanced question-answering within large legacy code repositories.
- Contributed to dataset development strategies and created tools for generating synthetic data to build xMainframe, a large language model for legacy code question answering.
- Engineered backend APIs for detailed mainframe code analysis, supporting large-scale legacy system modernization initiatives.

AI Engineer at *Resonance Technology* *Apr 2022 — Oct 2023*

- Researched in applying large language models and traditional machine learning for SEO and marketing competitive analysis, including keyword trend forecasting and topic exploration.
- Researched and developed a prototype AI Copilot to enable end-to-end SEO workflow automation within Writerzen, enhancing content creation efficiency.
- Led research and development of in-app AI features utilizing advanced prompt engineering, resulting in an 83.7% increase in platform user engagement.
- Designed and implemented high-performance SERP-based clustering algorithms, improving processing speed by 40% and achieving over 5x memory savings compared to previous solutions.

Data Scientist at *Be Group* *Jul 2021 — Apr 2022*

- Improved search API accuracy and increased top recommendation click rates from 55% to 70% by developing and optimizing ranking algorithms for personalized search.

- Designed and implemented a personalized Bayesian ranking engine, resulting in an 8% increase in recommendation clicks across the platform.
- Developed and deployed a Rasa-based conversational AI platform, automating customer support workflows and reducing manual intervention.
- Built a FastText-based semantic search engine, enhancing contextual understanding and relevance of search results for users.

Research Assistant at *NLP@UIT Laboratory, University of Information Technology* *Feb 2020 — Feb 2022*

- Created the first Vietnamese numerical reasoning dataset (COVIDROP) based on DROP, expanding Vietnamese NLP research resources.
- Designed and implemented annotation guidelines and labeling tools to ensure high-quality data collection.
- Implemented and evaluated neural models such as NAQANet and NumNet to benchmark dataset usability for numerical reasoning tasks.
- Contributed to research workshops on leveraging knowledge graphs for Vietnamese question answering, sharing techniques for semantic information extraction and reasoning.

EDUCATION

Master of Science (M.Sc.) in Computer Science, *University of Information Technology* Sep 2023 – Present
GPA: 3.7/4.0

Bachelor of Science (B.Sc.) in Data Science, *University of Information Technology* Sep 2018 – Jan 2022
GPA: 3.6/4.0 (Top 1 in Major)
Thesis: "Numerical Reasoning Reading Comprehension on Vietnamese COVID-19 News: Task, Corpus, and Challenges"

- **Publication:** Van Nguyen, K., Le, T.V. & Do, T.PP. (2024). Numerical reasoning reading comprehension on Vietnamese COVID-19 news: task, corpus, and challenges. *Neural Computing & Applications*, 36, 14053–14073. https://doi.org/10.1007/s00521-024-09744-5 (Q1 Journal)

SKILLS

- **Programming Languages:** Python (Expert), C/C++, Cython
- **Frameworks & Tools:** Docker, Git, Copilot, Cursor, FastAPI, WebSocket, Next.js
- **Data Science & Machine Learning:** NumPy, Pandas, Matplotlib, Seaborn, SciPy, Scikit-learn, PyTorch, XGBoost, LightGBM
- **Distributed Systems & MLOps:** PySpark, Kafka, MLflow, Weights & Biases (Wandb)
- **NLP & Generative AI:** OpenAI API, Gemini API, Ollama, Hugging Face, LangChain, LangGraph, Autogen
- **Cloud Platforms:** Google Cloud Platform, Microsoft Azure
- **Research Areas:** Natural Language Processing, Large Language Models, Deep Learning, Operations Research, Evolutionary Algorithms, Reinforcement Learning
- **Languages:** Vietnamese (Native), English (C1)
